PROJECTS

Smart Vendor Book Bank System (SVBBS) | Live Demo | GitHub

Tech Stack: React.js, Vite, Tailwind CSS, Node.js, Express.js, MongoDB Atlas, JWT, Gemini API, Groq, Vitest, GitHub Actions

- Engineered a full-stack **MERN** platform with 7 role-based dashboards and 80+ **REST API** endpoints, securing all routes with **JWT** authentication, refresh-token rotation, **CSRF** protection, and **RBAC**; deployed on **Vercel** and **Render** with **CI/CD**.
- Designed a scalable multi-provider AI layer using the **Strategy design pattern** with cascading failover (**Gemini**, **Groq**), powering 10+ AI features including semantic search and a recommendation engine with 100% uptime during API rate-limiting.
- Built a 141-test **Vitest** suite with **GitHub Actions CI/CD** enforcing code-coverage gating and dependency security audits per commit; applied **test-driven development** to catch critical data-integrity defects pre-deployment.

Tasty Kitchens (React Food Delivery Platform) | Live Demo | GitHub

Tech Stack: React.js, JavaScript, REST APIs, JWT Authentication, React Router DOM, Local Storage

- Built a fully responsive food delivery web application using **React.js** and **REST APIs** with **JWT-based authentication**; secured private routes and session management, delivering a seamless end-to-end ordering experience for users
- Engineered Search, Sort, and Filter logic across 50+ restaurants reducing user discovery time; implemented Persistent Cart via **Local Storage** and API state management (Loading/Success/Error) with **Pagination**, improving performance by 40%

Twitter Clone Backend | GitHub

Tech Stack: Node.js, Express.js, SQLite, JWT Authentication, bcrypt, REST APIs

- Designed and deployed a Twitter Clone **REST API** using **Node.js**, **Express.js**, and **SQLite** with 15+ protected endpoints covering tweet management, user profiles, following system, and personalized feed reducing API testing effort by 50%
- Implemented JWT-based authentication and **bcrypt** password hashing securing 100% of user credentials; applied **Middleware** Architecture for route-level access control following RESTful API design best practices

TECHNICAL SKILLS

Frontend: React.js, React Hooks, React Router DOM, React Context API, JavaScript (ES6+), HTML5, CSS3

Backend: Node.js, Express.js, REST APIs, JWT Authentication, bcrypt, Middleware Architecture

Database: SQLite (Joins, Subqueries, Indexing, Query Optimization), MongoDB, SQL

UI & Styling: Styled Components, Bootstrap, Flexbox, Responsive Design, Recharts

Tools & Deployment: Git, GitHub, VS Code, Postman, Command Line (CLI), Vercel

EXPERIENCE

NxtWave – CCBP 4.0 Academy

2025 – 2026

Full Stack Developer

Remote, India

- Completed an intensive 6-month industry-grade training program covering Frontend (React.js, HTML5, CSS3, JavaScript ES6+) and Backend (Node.js, Express.js, SQL, MongoDB) development.

EDUCATION

Nehru Institute Of Engineering And Technology

Nov 2021 – May 2025

B.Tech in Artificial Intelligence and Data Science

CGPA: 8.1/10.0

- Coursework:** Python, Operating Systems, Computer Networks, Machine Learning, DBMS, DSA

CERTIFICATIONS & ACHIEVEMENTS

Business English Certificate (BEC): Secured Grade A from Cambridge University

Machine Learning (NPTEL): Earned certification with Elite distinction

AICTE EduSkills Virtual Internship: Successfully completed AI-ML Virtual Internship program
